3.0 Screenshots of The Application Interface

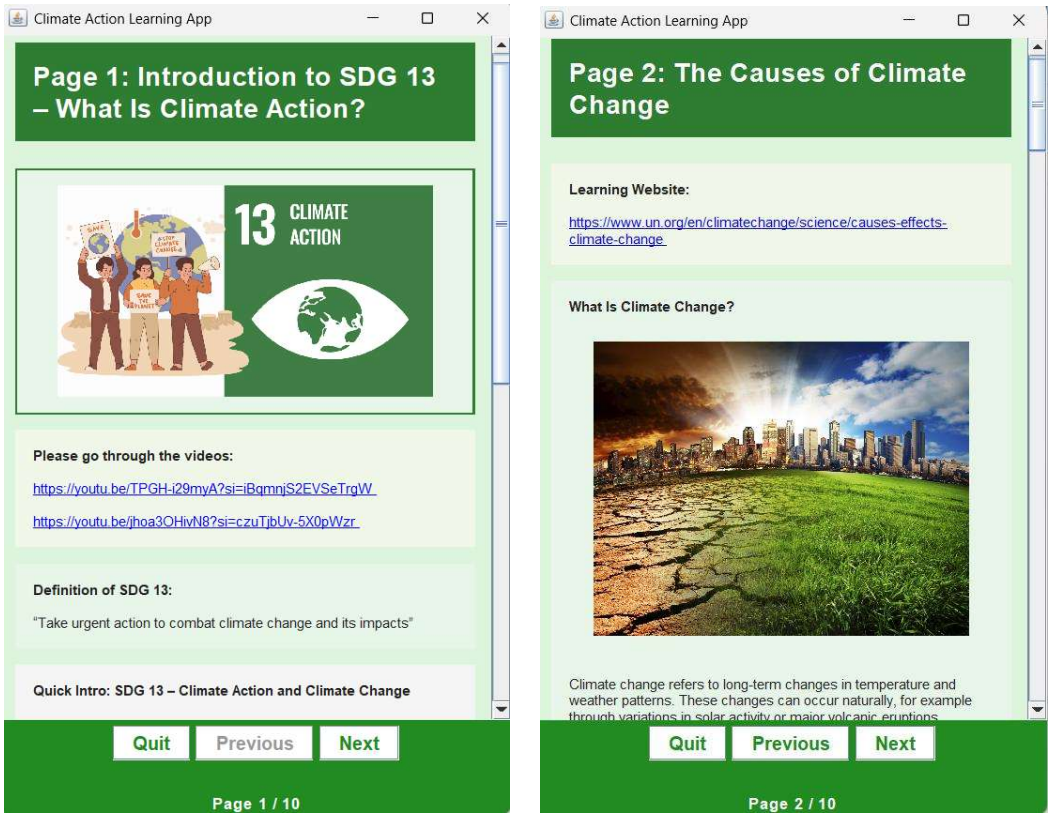

Interface 1: Welcome Message

The welcome message is displayed when the application is launched. It introduces the application by showing the application title, SDG theme, and current version number. This interface provides users with basic information about the system before entering the main menu.

Interface 2: Main Page Interface

Once 'ok' is clicked, the user will be navigated to main menu of the application. Users can choose their desired activity through the buttons: Learning Module, Quiz Module, Leaderboard, and Exit. The interface is designed with a climate-action theme using green colours, environmental icons, and an encouraging slogan to promote awareness of climate change and sustainable practices.

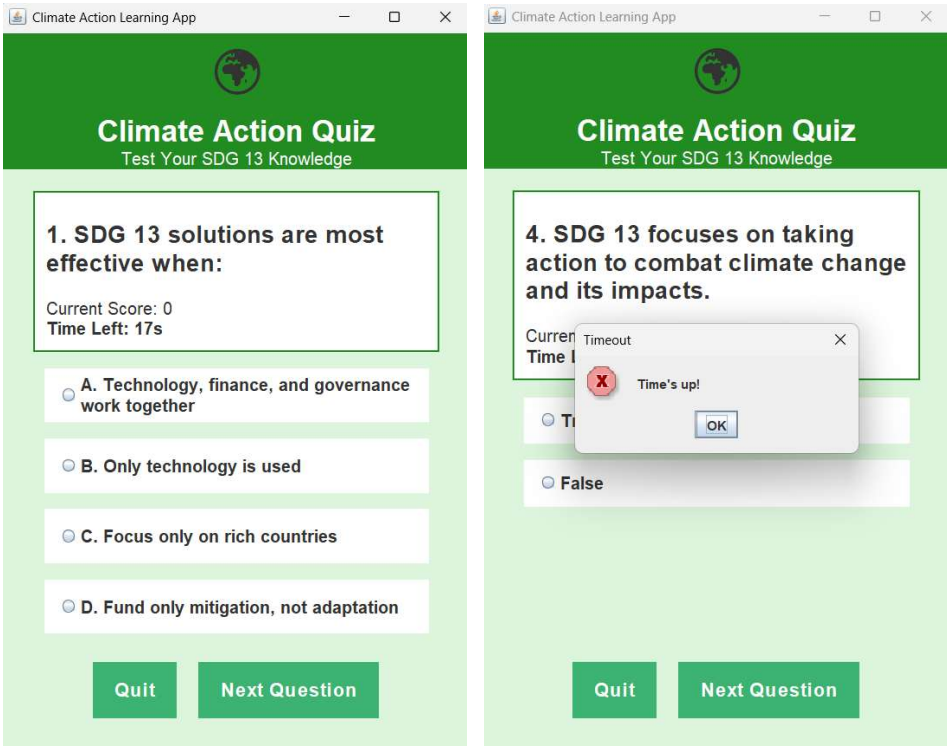

Interface 3: Learning Module Interface

The Learning Module provides educational content related to SDG 13: Climate Action. Information is organised into multiple pages containing explanations, images, and examples regarding climate change, its causes, impacts, and possible solutions. Users can navigate through the content using the Previous and Next buttons. Users can also go back to main menu through Quit button. This module aims to improve users' understanding of environmental issues before attempting the quiz.

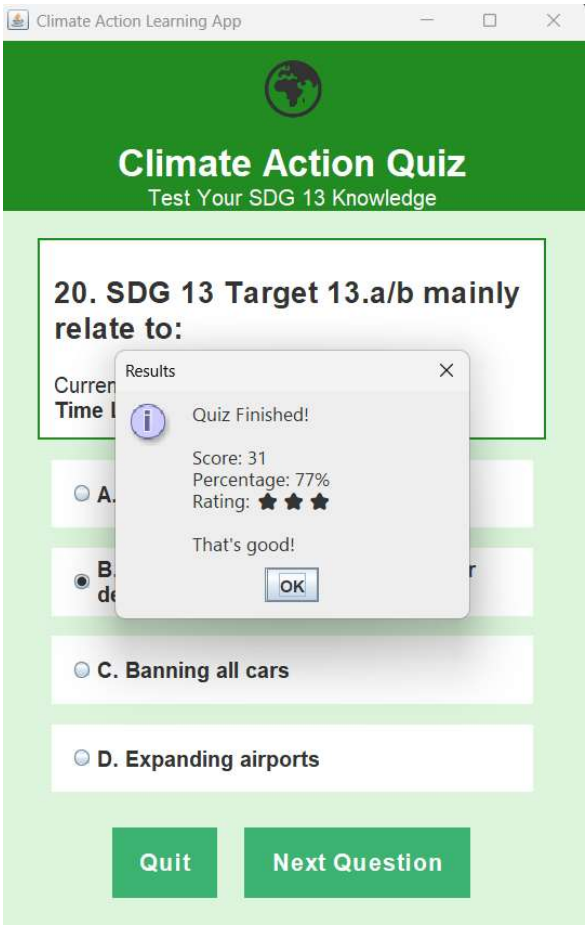

Interface 4: Username Input Dialog

Before starting the quiz, users are required to enter a username. The username is used to identify the player and record their quiz score in the leaderboard system. This allows users to compare their performance with others and encourages continued participation in the learning process.

Interface 5: Quiz Module Interface

The Quiz Module evaluates the user's knowledge of climate action concepts. Questions may consist of multiple-choice questions or true/false questions generated randomly from the question bank. Users can select only one answer at a time using radio buttons and proceed to the next question. The system automatically checks the selected answer and updates the user's score accordingly. If users can answer the question correctly within 5 seconds, 2 points will be awarded instead of 1. A timeout message will pop up, and the answer will be counted as incorrect if the timer exceeds 20 seconds. The timer increases the challenge and encourages users to think quickly while answering the questions.

Interface 6: Quiz Result Interface

After all questions have been answered, the system displays the user's final score and overall performance. The gamification component calculates rewards such as stars and badges based on the achieved score. This feature motivates users to improve their understanding of climate action topics and achieve better results in future attempts.

Interface 7: Leaderboard Interface

The Leaderboard displays the rankings of all recorded players. Information such as rank, username, score, stars, badges, and completion time is shown in a table format. The leaderboard encourages healthy competition among users and promotes continuous learning through gamification techniques.

Interface 8: Exit Confirmation Dialog

When the user selects the Exit button, the system displays a confirmation dialog to prevent accidental termination of the application. Users can choose either 'Yes' to close the application or 'No' to return to the main menu. This feature improves usability by preventing accidental application closure.
